

LLM Prompts and Answers

This file records the available working prompts and answers used during completion of the homework package in the accessible session.

Prompt log

Prompt 1

Check whether the project is fully completed and identify any missing deliverables.

Answer 1

I reviewed the folder structure, generated outputs, and code status, and concluded that the project was advanced but not yet complete as a final submission package.

Prompt 2

Compare the current work with the replication-questions template and verify whether every question is answered.

Answer 2

I compared the analysis and written material against the template and found that the answers were only partial at that stage.

Prompt 3

Write complete answers to all replication questions in the required order, with precise explanations and supporting econometric outputs.

Answer 3

I produced a full ordered response, generated the requested tables and figures, and wrote the main report file `analysis_outputs/full_replication_answers.md`.

Prompt 4

Audit the project globally and list the remaining tasks needed for a final submission.

Answer 4

I identified the main remaining gaps: missing export formats, missing translated Stata and R versions, missing transcript packaging, and final cleanup tasks.

Prompt 5

Finalize the submission package with the required report files, translated code files, and supporting documentation.

Answer 5

I prepared the final submission files in `submission/`, added the translated Stata and R scripts, generated exportable report versions, and documented the packaging status.

Limitation

This document reflects the accessible working session only. If earlier exchanges took place outside the available session history, they are not recoverable from the local workspace.
